the majority of cancers present at a relatively advanced stage in which invasion within the primary organ is well established and metastases to lymph and distant organs are either clinically apparent or present at the microscopic level however it is increasingly recognized that the natural history of cancer formation is a long and complex path taking many years to develop to a clinically apparent stage in most cases furthermore for most solid tumours there is a pre invasive or intraepithelial stage of disease this affords the opportunity for early detection and prevention of invasive disease and hence a cure however with this advancing knowledge comes a whole plethora of questions which will be explored in this monograph firstly we need to understand the global burden of pre invasive disease and what the public health implications might be for wide scale

screening programmes in the western world we already have experience of screening for cervical breast prostate and more recently colon cancer as well as their potential benefits these programmes have financial and psychosocial implications which need to be carefully weighed this is especially true since many pre invasive lesions will not progress to cancer in a individual s lifetime in addition there are questions concerning whether screening reduces the cancer burden or in fact distorts the survival figures through lead time bias secondly at the level of epidemiology and molecular pathogenesis there are important questions regarding the aetiology of pre invasive lesions an understanding of which might lead to possible chemopreventive strategies for example it would be helpful to know the extent to which the likelihood of developing a pre invasive lesion is influenced by lifestyle or genetic factors and how these factors influence the risk of progression to invasive disease at the molecular level we need to understand the pathways and molecular mechanisms both genetic and epigenetic by which cells achieve the capacity to invade thirdly in order make clinical progress we need biomarkers to identify and risk stratify individuals with pre invasive lesions these biomarkers might be applied to the serum as in prostate specific antigen in prostate cancer or be applied to tissue samples such as oestrogen receptor status in breast cancer in order to utilize biomarkers in the context of a screening programme there are issue around the invasiveness of the test as well as its positive and negative predictive value with advances in molecular imaging there is now the exciting possibility of incorporating a molecular tag to a non invasive imaging modality fourthly in order to justify screening early detection must be coupled to a treatment strategy if the chemopreventive agent is very well tolerated then as well as targeting high risk groups one might consider treatment at the population level aspirin is one such drug which has been extensively assessed in the context of colon cancer chemoprevention trials trials of aspirin chemoprevention are now being applied to other cancers such as oesophageal adenocarcinoma and since many individuals take aspirin for chemoprevention of cardiovascular disease the cancer incidence can be ascertained in these populations in order to understand the more general issues raised from the discussions above it is useful to consider disease specific examples our understanding of pre invasive disease varies according to the organ site and there are lessons to be learned from these experiences for example there is now the prospect of a vaccine for cervical cancer with important questions about how this might be applied to the high incidence areas of the developing world on the other hand ductal carcinoma in situ is currently treated by mastectomy which is more radical than the treatment received by many women with invasive disease oesophageal adenocarcinoma which is my own area of expertise is interesting because of the rapid rise in incidence in the western world and the clinically accessible pre invasive lesion called barrett s oesophagus however most cases of barrett s oesophagus remain undiagnosed and it is not yet clear how to effectively diagnose monitor and treat this condition without recourse to mass endoscopy with substantial cost implications in conclusion in an era in which preventive medicine is a major concern for consumers health policy makers and politicians pre invasive disease is likely to

become a major part of cancer medicine
